
Data and Samples
Macroeconomic data
1998.01-2026.02 338 months
EIA Brent FRED CNY/USD NBS FUEL/PPI/CPI
Customs data
2015-01-2026-02 134 months
RMB values / quantities
Calendar and variables
Monthly calendar
missing values retained
RMB oil cost = Brent × CNY/USD
Log changes · ΔYoY inflation · ADF / KPSS
Import unit value
Value / quantity (unit-scaled)
Log changes: unit value / quantity
Primary analysis
Import-cost associations
Link 1: stationary distributed-lag model(3 lags)
Link 2: stationary LP · Fuel/PPI
Link 1: HAC
Link 2: HAC + pairs MBB
Stationary local projections
Fuel / PPI / CPI · h = 0–12 · fixed lag controls
Period: HAC · Cumulative: pairs MBB
Pointwise intervals · BH-FDR / Holm
Comparisons and
assessment
Brent / FX components
Current components · equality
Common controls · collinearity
HAC tests
Price-stage comparisons
Period / cumulative associations
Paired contrasts · joint tests
Descriptive response shares
Robustness and stability
Rolling / recursive HAC / MBB / quantity
sensitivity Placebo / reverse-predictive
Formal: dependent-wild bootstrap
Main findings
Magnitude · timing · uncertainty · temporal variation
Conditional dynamic associations; no identified causal effects
